

OKC Products is proud to announce the Revision H release of the TimeMate controller. Although similar to the TimeMate in many respects, the TimeMate 2000 has had a complete overhaul of the battery charging system. In addition, the TimeMate 2000 program has been rewritten to provide a more basic, simplified user interface yet allow factory programming to meet a wider range of applications. Overall, the TimeMate 2000 is a very reliable, easy to use and cost effective well head controller.

*New Pop Up
Solar Panel*

The TimeMate 2000's charging system incorporates a new two season, high current solar panel to provide optimum battery charging in both the winter and summer seasons. This provides twice the spring-summer-fall charging current and four to five times the previous winter charging current.

*Charge
Regulation*

A new charge voltage and current regulation system eliminates the difficult and troublesome battery capacity monitoring control as well as expanding the charge input voltage range to +16 Vdc. This allows direct charging using an auto lighter connector.

*Simpler User
Interface*

Program changes in the TimeMate 2000 simplify the user interface by eliminating operating mode selections and the confusing power status displays. Although the manufacturing information, power status and other information displays are available, they are not directly accessible using the Data key.

*FRAM Memory
Back Up*

A major advancement in the TimeMate 2000 is the addition of a FRAM memory system to store well data, operating configuration and the sales information without the need for a back-up battery to retain the information. Operating configuration and sales data are factory programmed into each unit at the time of shipment.

Best Buy !!!

Other features such as the "pop up" two season solar panel, serial programming port, springless AA battery holder with retainer, and advanced "Set and Go" options combine to make the TimeMate 2000 the most versatile, reliable and easy to use controller you can buy.
