

*PumpMate
Emulation*

OKC Products, Inc. has added to its Predator™ line of drop-in controller replacement panels. **The Predator™ P1 panel is a direct, drop-in replacement for the PCS 1000 controller.** A fully PumpMate controller compliant panel, the Predator™ P1 provides the full range of the PumpMate features, reliability and simple operation.

*Extended
Features*

The Predator™ P1 panel extends the PCS 1000 functions to include dual A/B valve control, four switch or analog transducer inputs and a host of programmable features using the Windows based FramMate™ configuration software. With the FramMate™ software, changing the controller's operating configuration is as easy as clicking a mouse.

*EVS
System*

The heart of the Predator™ P1 panel is the Enhanced Valve Switching (EVS) system that dramatically improves operating reliability by virtually eliminating the power source as a critical component. The Predator™ P1 panel provides reliable operation and valve switching using any 3 Vdc to 24 Vdc power source over the full, extended operating temperature range.

*High
Reliability*

Gold plated contacts, conformal humidity coating and static discharge protection combine to make the Predator™ P1 panel extremely reliable and tolerant of harsh operating environments. Combine these attributes with a wide operating voltage range for non-stop, reliable performance.

*The Right
Stuff*

If you are tired of dealing with battery problems, fighting corrosive environments and trying to figure out how to operate your controller, the Predator™ P1 panel has all the right stuff to make life a lot easier.

“Unleashing the power of technology.”
