

Internet Access

OKC Products, Inc., in association with Data Technology Services, Inc., announces the LinkMate™ Net web service for PumpMate™ 2000 remote well access and management. This secure, multi-user web application provides 24/7 access to remote well locations throughout the United States and Canada using the web-based internet.

Remote Access Panel

A remote access panel (RAP) brings the remote PumpMate panel to the user, allowing direct interaction with the controller's command keys and LCD display. A Quick Set table shows all current PumpMate settings, such as CLOSE and OPEN times, and allows authorized users to modify the setting with the click of a button.

Real-Time Monitor

A real-time monitor (RTM) provides a dynamic view of well head operation with sensor gages, switch and set point status indicators, gas meter and PumpMate status display. Observe well operation as the plunger arrives at the well head or monitor work over operations right from your office. Think of the cost and time savings of not having to drive to the well location to check gages and rest assured that all is operating as it should.

Data Logging

The LinkMate™ Net application provides around the clock operational and sensor data for each well location. A Production Log presents data that summarizes production cycle performance for a quick, easy to read production report. Keyed to each production cycle, Event and Data logs provide operational and sensor data for detailed well performance analysis. A report generator allows users to select and export historical data in html, pdf, Excel, or Word format and send the report to an e-mail address.

Affordable Pricing

LinkMate™ Net services and remote wireless communications cost less than 15¢ per hour per well site. Required hardware includes DataMate™ communications interface and CommMate™ communications system with cellular data transceiver. Communication services are available throughout the United States and Canada. Call OKC Products, Inc. for an on-line demonstration or visit our web site and click on the LinkMate™ Net link for more information.
